ViPlex Express V3.0.5 Release Notes

New Features

- The internal source resolution of TB series devices supports a frame rate of 50 Hz.
- Users can specify an image for webpage media to display when TB series devices have no Internet access.
- Users can set a TB series device as the NTP server for time synchronization.

Improvements

Improved detection of whether a solution exceeds the limit.

Fixed Problems

Fixed known bugs and enhanced the overall user experience.
